EMV COMPLIANT CARD PAYMENT SOLUTIONS

creditcall
The Heart of Payments

Creditcall Ltd

eKashu

Proven in thousands of websites in both the US and UK. When called from your website's checkout page our hosted payment page securely captures your customers' payment details which we send to the bank or processor for authorization. We then provide a simple authorized or declined message which you can pass to your customer. As your site never sees the card details you are not responsible for keeping them secure.

easier website payments

Benefits

- Very simple integration – you can be up and running within a few days
- Seamless transition for customers from your checkout page to payment
- Tokenization of card details simplifies PCI DSS compliance and allows returning customers to pay without re-entering card details
- Supports all major credit and debit cards, and PayPal Express Checkout

The payment page can be customized using your site's style sheets (CSS) and incorporates all the essential e-Commerce features including:

- Support for AVS
- Visa 3-D Secure & MasterCard SecureCode
- Optional fraud screening
- Tokenization
