iSelf Series

Highest Security Levels

PCI PTS 3.x certified, the iSelf Series meets the highest and latest hardware and software security requirements. The range also complies with SRED and provides flexibility options with open protocol modules.

All Payment Options

The iUP250 + iUR250 enables EMV chip and PIN, MagStripe transactions on kiosks while respecting security standards and improving interactivity. The iUC150 offers contactless payment, enabling e-wallet and new payment use cases. It also complies with standards such as PayPass, PayWave and EMV contactless cards.

Transactions are simpler, faster and more secure.

Highly Ruggedized

Thanks to its robust design the iSelf Series stands up to the most demanding outdoor environments and a wide variety of adverse environmental conditions. Keypad, card-reader and contactless device components are proofed against vandalism (IK10) and extreme weather.

Easy Integration

Our compact and modular iSelf Series devices are embedded in their enclosure and integrated according to EVA / IMB market standards. Maintenance requires no additional equipment and updating is done simply with the iUP250 display and keypad. It is so flexible that interfacing with the entire kiosk system has never been so easy.

User-Friendly

The iSelf Series provides a simple and easy to use customer interface with brightly coloured backlit displays, LEDs and function keys, making their use a pleasurable experience. Transflective technology enables the iSelf Series to work in any lighting condition.

Flexible Communication and Connectivity

The iSelf Series provides a wide range of integrated connectivity features to communicate with kiosk and acquirer hosts. It includes USB (slave, master), RS232, Ethernet and optional GPRS, covering most kiosk system requirements.
